Overview

The `/usr/local/cpanel/scripts/install_dovecot_fts` script enables Internet Message Access Protocol (IMAP) Full-Text Search (FTS) Indexing (powered by Apache Solr™), which provides fast search capabilities for IMAP mailboxes. FTS significantly improves the speed and convenience of the search experience for iOS® device, Microsoft Outlook®, SquirrelMail, Horde, Roundcube, and Mozilla Thunderbird users.

The `/usr/local/cpanel/scripts/install_dovecot_fts` script

To use this script, run the following command as the `root` user:

```
/usr/local/cpanel/scripts/install_dovecot_fts
```

Arguments

The `/usr/local/cpanel/scripts/install_dovecot_fts` script does not accept arguments.

Warning:

The `--help` argument will **not** provide help documentation. Instead, the script will run as if you did not pass an argument.

Output

When the script successfully completes, you will receive a message similar to the following:

```
Loaded plugins: fastestmirror, tsflags, universal-hooks
Loading mirror speeds from cached hostfile
 * EA4: 208.74.121.37
Resolving Dependencies
--> Running transaction check
--> Finished Dependency Resolution

Downloading packages:
Running transaction check
Running transaction test
Transaction test succeeded
  Installing : cpanel-dovecot-solr-6.4.0-23.1.noarch                1/1
  Verifying  : cpanel-dovecot-solr-6.4.0-23.1.noarch                1/1

Complete!
```

The `/usr/local/cpanel/scripts/uninstall_dovecot_fts` script

To uninstall the Dovecot® FTS indexing, run the following command:

```
/usr/local/cpanel/scripts/uninstall_dovecot_fts
```
