

Metrics Editor

(cPanel >> Home >> Metrics >> Metrics Editor)

Overview

This interface allows you to select metrics programs to process your log files and provide traffic analysis for your account's domains.

Select programs

Note:

Your hosting provider controls whether you can select a statistics program in WHM's [Statistics Software Configuration](#) interface ([WHM >> Home >> Server Configuration >> Statistics Software Configuration](#)). If your hosting provider does not allow you to select a statistics program, the interface displays a lock icon (🔒).

To select which metrics to use, perform the following steps:

1. For each domain on your account, select the checkbox for each metrics program that you wish to use. You can select from the following programs:
 - [Webalizer](#)
 - [Analog Stats](#)
 - [AWStats](#)
2. Click *Save*.
