

View Relayers

(WHM >> Home >> Email >> View Relayers)

- [Overview](#)
- [Search for relayers](#)
- [The results table](#)
- [Mail Delivery Reports](#)
- [Additional documentation](#)

Overview

This interface lists users who have relayed mail. Relayed email is email that a user on your server forwards to a remote account.

Search for relayers

To search for a user who has relayed mail, perform the following steps:

1. Enter a range of dates in *Month/Date/Year* format in the *Start Date* and *End Date* text boxes.

Note:

Larger date ranges require more time to run.

2. Specify the time range in which you wish to search.
3. Click *Run Report*.

The results table

The interface sorts your query's results into the following four columns:

Column	Description
<i>User</i>	The cPanel username of the account that relayed the message.
<i>Domain</i>	The user's domain.
<i>Successful</i>	Whether delivery was successful. A value of 1 represents successful delivery.
<i>Data Sent</i>	The total amount of relayed data that the user sent.

Mail Delivery Reports

If you wish to view a detailed list of messages that a specific user sent, click that user's row. The [Mail Delivery Reports](#) interface (WHM >> Home >> Email >> Mail Delivery Reports) interface will appear with the detailed list.

For more information about how to filter and customize the detailed list, read our [Mail Delivery Reports](#) documentation.
